ANNUS KHAN

+91-75681-75224 | annuskhan7866@gmail.com | LinkedIn: Annus-khan | GitHub: Annuskhan | Jaipur, Rajasthan

EDUCATION

Swami Keshvanand Institute of Technology, Management & Gramothan **2023 – Present**

B.Tech, Electronics & Communication Engineering | Jaipur, India | CGPA: 8.65

Kendriya Vidyalaya No. 1 **2023**

Higher Secondary (12th Standard) | Udaipur, India | Percentage: 82.40%

SKILLS

Languages & Query: Python, C++, SQL

Libraries & Frameworks: Django, Django REST Framework (DRF), LangChain, NumPy, Pandas, Matplotlib, Sentence-Transformers, django-jazzmin

Visualization: Seaborn, Power BI, Chart.js, Tableau, Plotly

Database & Tools: MySQL, ChromaDB (Vector DB), Ollama, Git, GitHub, REST APIs

Core Concepts: Retrieval-Augmented Generation (RAG), Agentic AI Workflows, DSA, OOP, DBMS, Computer Networks, Operating Systems

EXPERIENCE

Bluestock Fintech Pvt. Ltd. **Jun 2026 – Aug 2026**

Data Analyst Intern | Jaipur, India

- Engineered an automated stock market ETL pipeline using Python, Alpha Vantage API, and MySQL, handling daily ingestion and rate-limiting for market equities.
- Developed automated daily dashboard updates and data validation pipelines with Pandas, ensuring duplicate-free relational database synchronization.

Busibees Ed-Tech Pvt. Ltd. **Jun 2025 – Aug 2025**

Machine Learning Intern | Jaipur, India

- Queried and analyzed 10,000+ record datasets using Pandas and SQL to surface 5+ key business trends, delivering weekly insight reports that guided product team prioritization.
- Spearheaded automated ETL/preprocessing pipelines slashing data cleaning time by 40%, and created Python visualizations (Matplotlib, Seaborn) reducing review time by 20%.

PROJECTS

Nexus: Enterprise Agentic RAG & Knowledge Retrieval System **October 2026**

Tech Stack: Python, Django, Django REST Framework, LangChain, ChromaDB, Ollama (Qwen 2.5), Hugging Face BGE, PyPDF, Serper API

- Built an end-to-end Agentic RAG application with Django REST Framework and LangChain, enabling automated PDF ingestion, recursive character chunking, and semantic vector indexing inside ChromaDB using local BGE embeddings.
- Orchestrated a local LLM agent with Ollama (qwen2.5:3b) supporting multi-turn memory and autonomous tool invocation for vector search, arithmetic evaluation, and live web search fallbacks via Serper API.
- Engineered context-sufficiency validation algorithms to curb hallucinations, deterministic document IDs for idempotent indexing and chunk replacement, and strict security controls including rate limiting, path traversal guards, and DOMPurify rendering.

Call Tracker CRM & Analytics Dashboard **September 2026**

Tech Stack: Python, Django, django-jazzmin, Pandas, NumPy, openpyxl, REST APIs, Chart.js, SQL

- Developed a comprehensive CRM utilizing Django and Pandas to automate the parsing of Excel lead data (via openpyxl), streamlining data entry and ensuring user-specific data isolation for telecaller pipelines.
- Architected interactive administrative dashboards using django-jazzmin and Chart.js to visualize daily conversion metrics, team performance analytics, and call histories via custom REST API endpoints.

ACHIEVEMENTS

- **DSA / Competitive Programming:** Solved 300+ algorithmic challenges on LeetCode and GeeksforGeeks, focusing on Tree, graph theory, dynamic programming, and SQL optimization.
- **Smart India Hackathon (SIH) 2025:** Led a team that cleared the intra-college preliminary round.
