SUMMARY

Data Analyst and B.Tech (ECE) student with hands-on experience delivering data-driven insights across Ed-Tech and software development domains. Automated ETL pipelines cutting processing time by 40%; built Power BI dashboards tracking 8+ KPIs; and achieved 90%+ model accuracy using Python, SQL, Pandas, and Scikit-learn. Top-10 finisher at national hackathons with a record of translating raw datasets into measurable business outcomes.

EDUCATION

Swami Keshvanand Institute of Technology (SKIT)

Jaipur, India

B.Tech in Electronics & Communication Engineering

Aug 2023 – Present

- **CGPA: 8.65 / 10.0**
- Relevant Coursework: Data Structures & Algorithms, Data Analytics, Statistical Analysis, Databases, Operating Systems, Computer Networks, Object-Oriented Programming (OOP)

TECHNICAL SKILLS

Languages & Query: SQL, Python, C/C++, HTML, CSS, JavaScript

Data Analysis & ML: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, TensorFlow, OpenCV

BI & Visualization: Power BI, Excel (Advanced), Tableau

Databases & Tools: MySQL, Firebase, Supabase, Git/GitHub, VS Code

Competencies: ETL Pipeline Automation, Predictive Modeling, Statistical Analysis, Data Visualization, NLP

EXPERIENCE

Data Analyst Intern

Jun 2025 – Aug 2025

Busibeas Ed-Tech Pvt. Ltd.

Jaipur, India

- Queried and analyzed 10,000+ record datasets using **Pandas and SQL** to surface 5+ key business trends, delivering weekly insight reports that directly guided product team prioritization.
- Spearheaded automated **ETL/preprocessing pipelines** that slashed manual data cleaning time by **40%**, ensuring consistent high-integrity inputs for weekly stakeholder reporting cycles.
- Streamlined complex analytical findings into **Python-based visualizations** (Matplotlib, Seaborn) for non-technical stakeholders, reducing report interpretation time by an estimated **20%**.

Web Development Intern

Jul 2024 – Aug 2024

KisTechno Software Pvt. Ltd.

Jaipur, India

- Shipped 3 full-stack modules integrating **JavaScript frontends** with **MySQL databases**, achieving zero critical bugs reported post-deployment across all modules.
- Coordinated version control using **Git** across a 5-engineer team, maintaining a consistent branching strategy that eliminated merge conflicts over an 8-week sprint cycle.

PROJECTS

Jarvis AI – NLP & Voice Automation | *Python, Gemini API, Speech Recognition, Pyttsx3*

Aug 2025

- Engineered a voice-controlled AI assistant leveraging **Google Gemini API** for natural language query processing, achieving sub-2-second end-to-end response latency in live testing.
- Automated 10+ desktop task workflows (web navigation, YouTube playback) via custom intent-parsing logic on live audio streams, cutting manual execution time by roughly **60%**.
- Integrated **real-time speech recognition** and text-to-speech (Pyttsx3) libraries, enabling seamless human-computer interaction across 3 acoustic test environments.
- Implemented modular command-routing architecture in **Python**, cutting feature addition time by 50% and enabling straightforward extensibility for future NLP capabilities.

End-to-End Data Pipeline & Visualization — *Python, Pandas, Matplotlib, REST APIs*

Oct 2025

- Orchestrated an automated **ETL pipeline** in Python to extract and flatten deeply nested JSON demographic data from a RESTful API, seamlessly processing batch requests of 100+ records.
- Extracted and transformed unstructured API payloads into a clean tabular format using **Pandas**, implementing custom HTTP status checks to ensure **100%** reliable data ingestion.
- Aggregated demographic statistics using Python data structures to compute baseline metrics—including average age, gender distributions, and geographic density.
- Generated programmatic **Matplotlib** visualizations to highlight regional user trends and exported the finalized dataset to CSV, preparing raw web data for downstream dashboarding.

E-Commerce Sales Dashboard | *Power BI, DAX, Data Modeling, Data Visualization*

Oct 2025

- Constructed an interactive **Power BI** dashboard tracking **8+ KPIs** (revenue, conversion rate, return rate), enabling real-time performance monitoring for business stakeholders.
- Transformed raw operational data by merging and cleansing **3+ CSV datasets** (10,000+ rows) including order histories and transaction logs, cutting data prep time by **30%**.
- Deployed DAX-based calculated measures and time-intelligence functions to support trend analysis across 12-month rolling windows, improving stakeholder decision speed by an estimated **25%**.
- Documented the end-to-end analytical workflow in a structured **GitHub repository**, ensuring full reproducibility and enabling onboarding of new contributors in under 30 minutes.

World Population Data Analysis | *SQL, MySQL, Relational Databases, Python*

Sep 2025

- Architected a normalized **relational database schema** in MySQL to store and manage demographic datasets spanning **195+ countries** and 10+ years of longitudinal records.
- Formulated **20+ complex SQL queries** (JOINS, subqueries, window functions) to extract population trends and growth-rate insights, reducing manual reporting effort by **35%**.
- Validated and cleansed large-scale **CSV files** to enforce referential integrity, achieving a **99%** data accuracy rate across all imported records before analytical use.
- Translated demographic metrics into a structured **analytical report** showcasing regional growth patterns, presented findings to a panel of 10+ peers and faculty reviewers.

ACHIEVEMENTS

Hackathons & Competitions

- **Top 10 of 600+ Teams** – 5G & 6G Hackathon, Delhi Technological University (DTU); recognized for ML-driven solution design.
- **2× National Finalist** – Smart India Hackathon (SIH); selected at institutional level at SKIT Jaipur, competing against 500+ national teams each cycle.
- **Rank 4 of 50+ Teams** – Webathon, MNIT Jaipur; awarded for rapid prototyping and UI/UX design excellence under a 24-hour constraint.

Technical Milestones

- **Competitive Programming:** Solved **200+ algorithmic challenges** on LeetCode and GeeksForGeeks, with a focus on graph theory, dynamic programming, and SQL query optimization.
- **Team Leadership:** Directed *Team Vectra* (5 engineers) across 2 national hackathons, coordinating end-to-end technical architecture and delivering production-ready prototypes within 36-hour windows.

CERTIFICATIONS & LANGUAGES

Certifications: Data Analysis with Python – freeCodeCamp (Developer Certification)

Languages: English (Professional Proficiency), Hindi (Native), Urdu (Native)
